#### **HIBP**

Registered: true Breach: true Name: Apollo Website: apollo.io

**Bio:** In July 2018, the sales engagement startup Apollo left a database containing billions of data points publicly exposed without a password. The data was discovered by security researcher Vinny Troia who subsequently sent a subset of the data containing 126 million unique email addresses to Have I Been Pwned. The data left exposed by Apollo was used in their "revenue acceleration platform" and included personal information such as names and email addresses as well as professional information including places of employment, the roles people hold and where they're located. Apollo stressed that the exposed data did not include sensitive information such as passwords, social security numbers or financial data. The Apollo website has a contact form for those looking to get in touch with the organisation. **Creation Date:** 2018-07-23T00:00:00

# POLLO

Registered: true Breach: true Name: Canva

Website: canva.com

**Bio:** In May 2019, the graphic design tool website Canva suffered a data breach that impacted 137 million subscribers. The exposed data included email addresses, usernames, names, cities of residence and passwords stored as bcrypt hashes for users not using social logins. The data was provided to HIBP by a source who requested it be attributed to "JimScott.Sec@protonmail.com". **Creation Date:** 2019-05-24T00:00:00

Registered: true Breach: true Name: Covve Website: covve.com

**Bio:** In February 2020, a massive trove of personal information referred to as "db8151dd" was provided to HIBP after being found left exposed on a publicly facing Elasticsearch server. Later identified as originating from the Covve contacts app, the exposed data included extensive personal information and interactions between Covve users and their contacts. The data was provided to HIBP by dehashed.com. **Creation Date:** 2020-02-20T00:00:00

Registered: true

Breach: true

Name: Data Enrichment Exposure From PDL Customer

**Bio:** In October 2019, security researchers Vinny Troia and Bob Diachenko identified an unprotected Elasticsearch server holding 1.2 billion records of personal data. The exposed data included an index indicating it was sourced from data enrichment company People Data Labs (PDL) and contained 622 million unique email addresses. The server was not owned by PDL and it's believed a customer failed to properly secure the database. Exposed information included email addresses, phone numbers, social media profiles and job history data.

Creation Date: 2019-10-16T00:00:00

Registered: true Breach: true

#### 4/21/24, 6:17 PM

Name: Elasticsearch Instance of Sales Leads on AWS

Bio: In October 2018, security researcher Bob Diachenko identified multiple exposed databases with

hundreds of millions of records. One of those datasets was an Elasticsearch instance on AWS containing sales lead data and 5.8M unique email addresses. The data contained information relating to individuals and the companies they worked for including their names, email addresses and company name and contact information. Despite best efforts, it was not possible to identify the owner of the data hence this breach as been titled "Elasticsearch Sales Leads". Creation Date: 2018-10-29T00:00:00

Registered: true Breach: true Name: Gravatar Website: gravatar.com

Bio: In October 2020, a security researcher published a technique for scraping large volumes of data from Gravatar, the service for providing globally unique avatars . 167 million names, usernames and MD5 hashes of email addresses used to reference users' avatars were subsequently scraped and distributed within the hacking community. 114 million of the MD5 hashes were cracked and distributed alongside the source hash, thus disclosing the original email address and accompanying data. Following the impacted email addresses being searchable in HIBP, Gravatar release an FAQ detailing the incident. Creation Date: 2020-10-03T00:00:00

Registered: true Breach: true Name: Instant Checkmate Website: instantcheckmate.com Bio: In 2019, the public records search service Instant Checkmate suffered a data breach that later came to light in early 2023. The data included almost 12M unique customer email addresses, names, phone numbers and passwords stored as scrypt hashes. Creation Date: 2019-04-12T00:00:00

Registered: true Breach: true Name: NetProspex Website: netprospex.com

Bio: In 2016, a list of over 33 million individuals in corporate America sourced from Dun & Bradstreet's NetProspex service was leaked online. D&B believe the targeted marketing data was lost by a customer who purchased it from them. It contained extensive personal and corporate information including names, email addresses, job titles and general information about the employer. Creation Date: 2016-09-01T00:00:00

Registered: true Breach: true Name: Verifications.io Website: verifications.io

Bio: In February 2019, the email address validation service verifications.io suffered a data breach. Discovered by Bob Diachenko and Vinny Troia, the breach was due to the data being stored in a MongoDB instance left publicly facing without a password and resulted in 763 million unique email addresses being exposed. Many records within the data also included additional personal attributes such as names, phone numbers, IP addresses, dates of birth and genders. No passwords were included in the data. The Verifications.io website went offline during the disclosure process, although an archived copy remains viewable.
