Id: 1144714
First Name: Herb
Location: Kansas City, MO
Profile Url: https://www.airbnb.com/users/show/1144714

Bio: Slightly over-caffeinated serial entrepreneur from the midwest. Former investment professional and military pilot. I only know 2 speeds - on or off. Can't live without my family, good coffee, loud music (played through my ipod or in my car), technology devices and the belief that treating people right in the world still counts for something. Personal motto is Carpe Diem. While I am not trying to save the world,I do believe that good capitalism can save part of it. As a guest, I am pretty low maintenance, but I do like to have the ability to get some work done when traveling for business. I am always up for making the world a bit smaller by connecting with others and learning more about the world around me. I am not an open book the first minute you meet me but I am friendly, easy going and straighforward.

Breach: true
Name: Apollo
Website: apollo.io
Bio: In July 2018, the sales engagement startup Apollo left a database containing billions of data points publicly exposed without a password. The data was discovered by security researcher Vinny Troia who subsequently sent a subset of the data containing 126 million unique email addresses to Have I Been Pwned. The data left exposed by Apollo was used in their "revenue acceleration platform" and included personal information such as names and email addresses as well as professional information including places of employment, the roles people hold and where they're located. Apollo stressed that the exposed data did not include sensitive information such as passwords, social security numbers or financial data. The Apollo website has a contact form for those looking to get in touch with the organisation.

Breach: true
Name: AT&T
Bio: In March 2024, tens of millions of records allegedly breached from AT&T were posted to a popular hacking forum. Dating back to August 2021, the data was originally posted for sale before later being freely released. At the time, AT&T maintained that there had not been a breach of their systems and that the data originated from elsewhere. 12 days later, AT&T acknowledged that data fields specific to them were in the breach and that it was not yet known whether the breach occurred at their end or that of a vendor. AT&T also proceeded to reset customer account passcodes, an indicator that there was sufficient belief passcodes had been compromised. The incident exposed names, email and physical addresses, dates of birth, phone numbers and US social security numbers.

Breach: true
Name: B2B USA Businesses
Bio: In mid-2017, a spam list of over 105 million individuals in corporate America was discovered online. Referred to as "B2B USA Businesses", the list categorised email addresses by employer, providing information on individuals' job titles plus their work phone numbers and physical addresses. Read more about spam lists in HIBP.
Creation Date: 2017-07-18T00:00:00

Breach: true

Name: CafePress
Website: cafepress.com
Bio: In February 2019, the custom merchandise retailer CafePress suffered a data breach. The exposed data included 23 million unique email addresses with some records also containing names, physical addresses, phone numbers and passwords stored as SHA-1 hashes. The data was provided to HIBP by a source who requested it be attributed to "JimScott.Sec@protonmail.com".

Breach: true
Name: Canva
Website: canva.com
Bio: In May 2019, the graphic design tool website Canva suffered a data breach that impacted 137 million subscribers. The exposed data included email addresses, usernames, names, cities of residence and passwords stored as bcrypt hashes for users not using social logins. The data was provided to HIBP by a source who requested it be attributed to "JimScott.Sec@protonmail.com".

Breach: true
Name: Covve
Website: covve.com
Bio: In February 2020, a massive trove of personal information referred to as "db8151dd" was provided to HIBP after being found left exposed on a publicly facing Elasticsearch server. Later identified as originating from the Covve contacts app, the exposed data included extensive personal information and interactions between Covve users and their contacts. The data was provided to HIBP by dehashed.com.

Breach: true
Name: Data Enrichment Exposure From PDL Customer
Bio: In October 2019, security researchers Vinny Troia and Bob Diachenko identified an unprotected Elasticsearch server holding 1.2 billion records of personal data. The exposed data included an index indicating it was sourced from data enrichment company People Data Labs (PDL) and contained 622 million unique email addresses. The server was not owned by PDL and it's believed a customer failed to properly secure the database. Exposed information included email addresses, phone numbers, social media profiles and job history data.
Creation Date: 2019-10-16T00:00:00
Registered: true
Breach: true
Name: Disqus
Website: disqus.com
Bio: In October 2017, the blog commenting service Disqus announced they'd suffered a data breach. The breach dated back to July 2012 but wasn't identified until years later when the data finally surfaced. The breach contained over 17.5 million unique email addresses and usernames. Users who created logins on Disqus had salted SHA1 hashes of passwords whilst users who logged in via social providers only had references to those accounts.
**Creation Date:** 2012-07-01T00:00:00

Breach: true
Name: Epik
Website: epik.com
Bio: In September 2021, the domain registrar and web host Epik suffered a significant data breach, allegedly in retaliation for hosting alt-right websites. The breach exposed a huge volume of data not just of Epik customers, but also scraped WHOIS records belonging to individuals and organisations who were not Epik customers. The data included over 15 million unique email addresses (including anonymised versions for domain privacy), names, phone numbers, physical addresses, purchases and passwords stored in various formats.
Creation Date: 2021-09-13T00:00:00

Registered: true
Breach: true
Name: Exactis
Website: exactis.com
Bio: In June 2018, the marketing firm Exactis inadvertently publicly leaked 340 million records of personal data. Security researcher Vinny Troia of Night Lion Security discovered the leak contained multiple terabytes of personal information spread across hundreds of separate fields including addresses, phone numbers, family structures and extensive profiling data. The data was collected as part of Exactis' service as a "compiler and aggregator of premium business & consumer data" which they then sell for profiling and marketing purposes. A small subset of the exposed fields were provided to Have I Been Pwned and contained 132 million unique email addresses.
Creation Date: 2018-06-01T00:00:00
Registered: true
Breach: true
Name: Forbes
Website: forbes.com
Bio: In February 2014, the Forbes website succumbed to an attack that leaked over 1 million user accounts. The attack was attributed to the Syrian Electronic Army, allegedly as retribution for a perceived "Hate of Syria". The attack not only leaked user credentials, but also resulted in the posting of fake news stories to forbes.com.
Creation Date: 2014-02-15T00:00:00

Breach: true
Name: Houzz
Website: houzz.com
Bio: In mid-2018, the housing design website Houzz suffered a data breach. The company learned of the incident later that year then disclosed it to impacted members in February 2019. Almost 49 million unique email addresses were in the breach alongside names, IP addresses, geographic locations and either salted hashes of passwords or links to social media profiles used to authenticate to the service. The data was provided to HIBP by dehashed.com.
Creation Date: 2018-05-23T00:00:00

Registered: true
Breach: true
Name: Instant Checkmate
Website: instantcheckmate.com
Bio: In 2019, the public records search service Instant Checkmate suffered a data breach that later came to light in early 2023. The data included almost 12M unique customer email addresses, names, phone

numbers and passwords stored as scrypt hashes.
**Creation Date:** 2019-04-12T00:00:00

Registered: true
Breach: true
Name: Lead Hunter
Bio: In March 2020, a massive trove of personal information referred to as "Lead Hunter" was provided to HIBP after being found left exposed on a publicly facing Elasticsearch server. The data contained 69 million unique email addresses across 110 million rows of data accompanied by additional personal information including names, phone numbers, genders and physical addresses. At the time of publishing, the breach could not be attributed to those responsible for obtaining and exposing it. The data was provided to HIBP by dehashed.com.
Creation Date: 2020-03-04T00:00:00
Registered: true
Breach: true
Name: LinkedIn
Website: linkedin.com
Bio: In May 2016, LinkedIn had 164 million email addresses and passwords exposed. Originally hacked in 2012, the data remained out of sight until being offered for sale on a dark market site 4 years later. The passwords in the breach were stored as SHA1 hashes without salt, the vast majority of which were quickly cracked in the days following the release of the data.
Creation Date: 2012-05-05T00:00:00

Registered: true
Breach: true
Name: LinkedIn Scraped Data (2021)
Website: linkedin.com
Bio: During the first half of 2021, LinkedIn was targeted by attackers who scraped data from hundreds of millions of public profiles and later sold them online. Whilst the scraping did not constitute a data breach nor did it access any personal data not intended to be publicly accessible, the data was still monetised and later broadly circulated in hacking circles. The scraped data contains approximately 400M records with 125M unique email addresses, as well as names, geographic locations, genders and job titles. LinkedIn specifically addresses the incident in their post on An update on report of scraped data.
Creation Date: 2021-04-08T00:00:00

Registered: true
Breach: true
Name: MyFitnessPal
Website: myfitnesspal.com
Bio: In February 2018, the diet and exercise service MyFitnessPal suffered a data breach. The incident exposed 144 million unique email addresses alongside usernames, IP addresses and passwords stored as SHA-1 and bcrypt hashes (the former for earlier accounts, the latter for newer accounts). In 2019, the data appeared listed for sale on a dark web marketplace (along with several other large breaches) and subsequently began circulating more broadly. The data was provided to HIBP by a source who requested it to be attributed to "BenjaminBlue@exploit.im".

Creation Date: 2018-02-01T00:00:00

Registered: true
Breach: true
Name: Promo
Website: promo.com
Bio: In July 2020, the self-proclaimed "World's #1 Marketing Video Maker" Promo suffered a data breach which was then shared extensively on a hacking forum. The incident exposed 22 million records containing almost 15 million unique email addresses alongside IP addresses, genders, names and salted SHA-256 password hashes. The data was provided to HIBP by dehashed.com.
Creation Date: 2020-06-22T00:00:00

Breach: true
Name: ShareThis
Website: sharethis.com
Bio: In July 2018, the social bookmarking and sharing service ShareThis suffered a data breach. The incident exposed 41 million unique email addresses alongside names and in some cases, dates of birth and password hashes. In 2019, the data appeared listed for sale on a dark web marketplace (along with several other large breaches) and subsequently began circulating more broadly. The data was provided to HIBP by dehashed.com.
Creation Date: 2018-07-09T00:00:00

Registered: true
Breach: true
Name: Trello
Website: trello.com
Bio: In January 2024, data was scraped from Trello and posted for sale on a popular hacking forum. Containing over 15M email addresses, names and usernames, the data was obtained by enumerating a publicly accessible resource using email addresses from previous breach corpuses. Trello advised that no unauthorised access had occurred.
Creation Date: 2024-01-16T00:00:00

Registered: true
Breach: true
Name: Twitter (200M)
Website: twitter.com
Bio: In early 2023, over 200M records scraped from Twitter appeared on a popular hacking forum. The data was obtained sometime in 2021 by abusing an API that enabled email addresses to be resolved to Twitter profiles. The subsequent results were then composed into a corpus of data containing email addresses alongside public Twitter profile information including names, usernames and follower counts.
Creation Date: 2021-01-01T00:00:00

Registered: true
Breach: true
Name: Verifications.io
Website: verifications.io
Bio: In February 2019, the email address validation service verifications.io suffered a data breach. Discovered by Bob Diachenko and Vinny Troia, the breach was due to the data being stored in a MongoDB instance left publicly facing without a password and resulted in 763 million unique email addresses being exposed. Many records within the data also included additional personal attributes such as names, phone

numbers, IP addresses, dates of birth and genders. No passwords were included in the data. The Verifications.io website went offline during the disclosure process, although an archived copy remains viewable.
Creation Date: 2019-02-25T00:00:00

Registered: true
Breach: true
Name: Zomato
Website: zomato.com
Bio: In May 2017, the restaurant guide website Zomato was hacked resulting in the exposure of almost 17 million accounts. The data was consequently redistributed online and contains email addresses, usernames and salted MD5 hashes of passwords (the password hash was not present on all accounts). This data was provided to HIBP by whitehat security researcher and data analyst Adam Davies.
